

Project 1

Muhammad Ali Khan | Maud Mainnemard | Mat Crawshaw

Concept

- User story and motivation: As keen holidayers, we wanted to create a site which helps us gather information on potential cities we would want to visit.
- Project description: A website which allows the end user to search cities and find the most popular tourist attractions, hotels and local news.

Our Process

Agreeing on the user story and wireframing.

Dividing the features for each member to complete

- Creating fully functioning api requests which append to the page
- Creating welcome page with 'meet our team' and 'comment sections'
- Creating 'saved places' page which displays favorited locations

Tracking our progress with GitHub project.

Having daily meetings and discussions on Slack and doing pair programming to work through challenges.

API's used

Hotels.com, unsplash.com,
TheGuardian.com, opentripmap.io

<https://drive.google.com/file/d/1nijpUV0GpHKKZUqyfuGyjOE7JXb2qE6g/view>

Challenges

Challenges:

- Opentripmap.io
- Bootstrap grid system
- Local storage
- Git workflow

Successes:

- Working Carousel
- Saved places page
- Git workflow

Directions for Future Deployment

- Add more sections e.g. restaurants, weather.
- Being able to search for more location types (states/regions), not just cities.
- Use a different news API which displays more up-to-date articles.
- Organise saved places by location where saved restaurants hotels etc. are displayed. It could also show opening times of the attractions.
- Add hotel booking section using hotel booking api.

Any Questions?
